

NAME

`incluseres` – filter to include resources in a PostScript document

SYNOPSIS

`incluseres < document.ps > output.ps`

DESCRIPTION

Incluseres includes resources (fonts, procsets, patterns, files, etc) in place of `%%IncludeResource` comments in a PostScript document. The resources are searched for in the current directory and the system default directory under the resource name, and with an appropriate extension. The pipeline

```
extractres file.ps | incluseres >out.ps
```

will move all resources appearing in a document to the document prologue, removing redundant copies. The output file can then be put through page re-arrangement filters such as *psnup* or *pstops* safely.
